EDUCATION

OXFORD COLLEGE OF ENGINEERING (VTU) — Bengaluru, India
Bachelor of Engineering in Computer Science and Engineering — Aug 2019 – May 2023
CGPA: 8.41/10.0

TECHNICAL SKILLS

Programming Languages: Java, Groovy, SQL, Python
Technologies/Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Grails, RESTful APIs, Microservices, JWT, MySQL, Oracle DB, PostgreSQL, Redis, JUnit 5, Playwright
Developer Tools: Docker, Jenkins, Git, GitHub Actions, CI/CD, Maven, Postman, IntelliJ IDEA, VS Code, Claude Code
Concepts: Data Structures & Algorithms, System Design, Low-Level Design, OOP, Design Patterns, Concurrency, Caching

WORK EXPERIENCE

ELLUCIAN (Banner ERP product suite) — Bengaluru, India
Software Engineer 1 — Jun 2023 – Jul 2025

- Developed and deployed 15+ RESTful APIs using Groovy on Grails and Spring in a Docker-based microservices setup, moving error-prone client-side data handling into validated server-side logic across Ellucian's Banner ERP suite.
- Optimized MySQL and Oracle database schemas and indexes to address query-performance bottlenecks and improve data retrieval across critical backend workflows.
- Automated API regression testing using Playwright and Node.js, integrating test suites into Jenkins CI/CD pipelines to detect regressions before release and reduce manual testing effort.
- Diagnosed and fixed production transaction failures caused by Oracle CLOB handling, restoring reliable processing in affected workflows.
- Profiled and debugged Grails and Hibernate services to remove performance bottlenecks in high-usage endpoints.
- Made client onboarding repeatable and configuration-driven by creating standard schema templates and extension payloads.

ELLUCIAN — Bengaluru, India
Technical Intern — Feb 2023 – May 2023

- Developed business-logic APIs that automated manual student-data workflows for client institutions.
- Designed MySQL schemas for new backend services for consistent, efficient data access; tested APIs with Postman.

PROJECTS

PRISM - API GATEWAY FOR LLM PROVIDERS (Java 21, Spring Boot, PostgreSQL, Redis, Docker, Nginx) — Oct 2026

- Built a multi-module Spring Boot gateway (separate data and control planes) giving teams one OpenAI-compatible endpoint with hashed API keys, per-team budgets and usage metering at 12 ms p95 added latency.
- Prevented over-admission under concurrent load with an atomic Redis Lua sliding-window rate limiter and reserve-then-settle PostgreSQL budgets, staying correct across horizontally scaled replicas.
- Added timeouts, retries with exponential backoff and jitter, health probes and automatic provider failover, plus SSE streaming on Java virtual threads; covered by 95 unit and Testcontainers tests in GitHub Actions CI.

TASKMASTER - TEAM TASK MANAGEMENT API (Spring Boot, Spring Security, JWT, MySQL, JPA) — Aug 2026

- Built a secure team-collaboration REST API with JWT authentication, BCrypt hashing, token revocation and team-membership authorization on every resource.
- Added task search, filtering, sorting and pagination (JPA Specifications), file attachments and global error handling; documented with Swagger.

URL SHORTENER API (Spring Boot, MySQL, Redis, Docker, GitHub Actions) — Aug 2026

- Built a URL shortening REST API that serves redirects from a Redis cache, keeping repeat lookups off MySQL.
- Added a nightly job to purge expired links; containerized with Docker, with GitHub Actions CI on every push.

ACHIEVEMENTS

- Runner-up, Ellucian company-wide hackathon (2023) for a chatbot that automated answers to product queries
- Solved 160+ data structures and algorithms problems on LeetCode
